

The diagram shows a large, light-orange rounded rectangle representing a cell. Inside this cell, there are four smaller, light-green rounded rectangles arranged horizontally. Each green rectangle contains a text label for a specific signaling pathway. The labels are: 'Interferon Signaling', 'Signaling by Interleukins', 'Growth hormone receptor signaling', and 'Prolactin receptor signaling'. The word 'cell' is written in black text below the green rectangles, centered within the orange container.
